Formulation guidelines.

FAQ's.

Are Dia Richesse and Dia color mixable?

Dia Richesse & Dia color are totally intermixable. Note that when the 2 products are mixed together, the percentage of natural origin ingredients is diminished.

Are the Dia color DIActiveur, 6, 9 and 15 volume identical to the one of Dia Richesse & Dia light?

Yes, the formula has not changed.

Are there any shades formulated with special dyes?

In the Dia color portfolio, shades 6.60, 4.62, and 4.20 contain DM5.

Can we mix the DM5 and P5 shades with other shades in the portfolio?

To guarantee best results, it is not advised to mix DM5 shades with other shades in the portfolio to avoid unexpected color shift. We strongly advise using these specialized shades on clients with up to 50% white hair and not for clients with 50% - 70% white hair.

What is the difference between grey coverage and blending?

By "coverage," we mean that white hair is not visible as the hair has been entirely opacified (or with a very slight transparency) by the coloration product. When white hair is "blended," there is more visible transparency, resulting in softer regrowth effect.

How many levels of lift are possible with Dia color?

In most cases, Dia color can lift up to 1 level with 15 volume DIActiveur. When certain shades of Dia color are applied to clients with fine hair, the formula can lift up to 1.5 levels.

After a root touch-up service, do I take through with Dia color or Dia light?

It's always better to take through any hair color with Dia light for optimal respect of the hair fiber & to benefit from the qualities of Dia light on previously sensitized hair. It is especially recommended to use Dia light to guarantee better long-term results, application after application. However, Dia color can be used to take through Dia color as a refresh service, especially if your priority is to save time and formula without requiring another mix.

FAQ's continued.

How do we recreate shades in Dia Richesse using Dia color?

Checkout our Dia Richesse conversion guides to understand how to be recreate shades in Dia Richesse.

When I want to darken or tint back a client's hair, should I use Dia light or Dia color?

Dia color with 9 volume DIActiveur is able to darken in one process up to 4 levels. Dia light with 9 volume DIActiveur is able to darken up to 2.5 levels in 20 minutes. When you want to darken more than 2 levels with Dia light, we recommend using a "color in" technique to progressively darken the hair. Process an in-between color for 10 minutes, rinse and then apply your target shade & develop for 20 minutes with 9 volume DIActiveur.

Is Dia color vegan?

No. Dia color is not vegan.

What are the natural-origin ingredients in the formula?

Across all the Dia color shades, the formula contains between 84% and 92% natural origin ingredients. These ingredients include water, hyaluronic acid, glycerin, shea butter, and propanediol. The remaining formula composition includes colorants, MEA, and stabilizing agents.

What are the cosmetic agents in Dia color, given that Ionene G is not a featured ingredient as it was in Dia Richesse?

Dia color is a new and superior formula that is different from Dia Richesse with a new base and new dye associations. There is no compromise to color performance or cosmeticity. The formula is enriched with shea butter.

Clear

One shade, multiple possibilities.

- Soften the intensity of the tone.
- Create a lighter or custom shade.

Formulation guidelines.

First reflect & shine

1. Determine the natural base.
2. Choose a shade.
3. Choose the right DIActiveur according to the natural base & the target shade.

Different options	1 Level darker	Tone on tone darker	1 Level lighter
Example: Your client is natural base 6	(5.8)/9 vol.	(6.84)/9 vol. for a standard tone-on-tone maintenance	(7.8)/15 vol.
Development time	20 minutes		

First white hair & shine

1. Determine the natural base.
2. Determine the percentage of white hair.
3. Select the target shade according to the natural base.
4. Select the adapted DIActiveur depending on the type of blending (9 vol.) /optimized blending (15 vol.) the clients wants.

	0% to 30%	30% - 50%	50% - 70%
Recipe	Natural shade OR Reflect shade	Natural shade OR 1/4 natural shade + 3/4 reflect shade	Natural shade OR 1/2 natural shade + 1/2 reflect shade
DIActiveur 9 volume	For tone-on-tone results	For white blending	
DIActiveur 15 volume	For more reflect visibility	For optimized white hair blending OR more reflect visibility	For optimized white hair blending

Formulation guidelines.

Preparation

1 to 1.5 mixing ratio 1 tube (2 oz.) to 3 oz. DIActiveur developer. Measure 3 oz. of 6-vol. DIActiveur (1.8%), 9-vol. (2.7%) or 15-vol. (4.5%), depending on the desired intensity of the result.

Application

First application: 20 min development time starts at the end of the application.

Regrowth touch up

Apply on the regrowth area, start development time of 20 min, then:

- Take through immediately to revive color with deeper result and/or darken.
- Take through after 10 min, when lengths & ends are moderately faded.
- Emulsify for the 5 last minutes, when color is slightly faded.

The logo for L'Oréal Professionnel Paris is centered on a white background. It features the word "L'ORÉAL" in a large, black, serif font. Below it, the word "PROFESSIONNEL" is written in a smaller, black, sans-serif font, enclosed within a thick black horizontal bar. Underneath the bar, the word "PARIS" is written in a black, sans-serif font. The entire logo is surrounded by several large, glossy, orange-colored spheres of varying sizes, some of which are partially cut off by the edges of the frame.
